Crustavus ignores the red flags (three to be exact)

Crustavus faces lawsuit from Six Flags over the addition of three more flags to Three Flags

Carter Brown
News Writer

On Apr. 1, it has been informed to the Weekly that, at the start of the next school year, the popular "Three Crowns" curriculum will be renamed to "Six Flags", after the six continents that humans currently inhabit. The change is meant to be more inclusive and indicative of a focus on understanding different worldviews no matter what part of the world you come from. The transition has been in the works for a while, and due to COVID putting global on a larger scale than seen before, it provided an even bigger incentive for this change.

The new Six Flags curriculum will have six different paths, or "rides", you can choose from each semester. These "rides" include the regular Three Crowns courses but includes courses about a culture from that continent as well. The idea is to help the student take a "ride" through that continent while completing their regular courses, staying true to the new Six Flags slogan - "Go show the world! Go Six Flags!" - which can be used in addition to the rouser to show your Six Flags pride.

There is some controversy, however, as there is the popular Texas-based amusement park chain Six Flags has decided to take action against Gustavus in the form of a lawsuit. The amusement park company claims that Gustavus has "ripped them off" in their ideas, citing an identical name, somewhat identical gimmick ("rides"), and a near identical slogan to theirs which is "Go big! Go Six Flags!"

Crustavus' claims, while unofficial at the moment, that any similarities to the popular amusement park is purely coincidental. The new Six Flags curriculum slogan is meant to combine Crustavus' popular "Show the World" saying with some "hype" for the new curriculum in hopes of continuing to attract students despite the change. In addition, the "rides" are named so in order to offer an exciting feel to the routes rather than having students feel as if they are just choosing

No thoughts. Head empty. No brain power for a caption, but we'll admit that this isn't looking good for us

Luke Yang

a path, rather than experiencing something.

Other than this information, there is not a lot else to report on the matter as the curriculum is still not going to be finalized until the 2021-2022 academic year, and the amusement park, Six Flags, has not yet filed the lawsuit. An attempt was made to contact the CEO of Six Flags, the amusement park, but there was no answer and no comment was offered. Lastly, another decision was made that Gus the Lion will be handling this lawsuit as the face of Crustavus, since he is our mascot. Therefore, any additional questions or requests for additional information should be directed towards him - wherever he may be. Please continue to give your support to both Gus the Lion and the rest of the Crustavus community as we try and get through this. We all need it.

Best of Crampus Soofety Repoot

- **Epic COVID-19 gamer moment:** On Sunday, September 27, 2020, at 0116 hours, campus safety responded to a noise violation in Norelius Hall. Four students violated the college covid-19 policy, 1 student had consumed alcohol and had possession of alcohol, 3 non-GAC students were also present. The 4 students referred to the campus conduct system, the 3 non-students were asked to leave campus.
- **Wet Hot Gustavus Winter:** On Monday, February 15, 2021 at 1319 hours, Cam-

pus Safety responded to a water sprinkler head that shot off that caused a lot of water damage in Nobel.

- **Awkwardest moment:** On November 1, 2020 at approximately 0445 Campus Safety received a call of a student entering the wrong room in North Hall.
- **Wait, they can do that?:** On Tuesday, November 10, 2020 at 1021 hours, Campus Safety witnessed a stop sign violation by Hollingsworth football field, the student was cited.
- **Classic Gustavus:** On

Thursday, March 4, 2021 at 0841 hours, a Gustavus employee reported that someone had chalked the Linnaeus bust statue.

- Hall with the most alcohol violations: Probably CoEd
- Hall with the strongest odor: ArmPitman
- Hall most likely to burn down: Ulher because that's where the Wookly office is

Ben Wick
Assistant Editor-in-Beef

The Crampus Activities and Recreation Board (CARB) has announced that this year's Spring Concert will be played by Icelandic pop-rock-alt-indie-folk band Lagarfljót. Opening the show will be none other than Cher, as part of her 14th Farewell/Reunion World Tour. The response from the Crustie community has been rather lukewarm, as CARB seems to have chosen a completely different band over the winner of the campus-wide poll sent out via Student-L this winter. The poll didn't actually include Lagarfljót as an option, but as CARB likes to keep everyone on their toes, they have opted for yet another out-of-the-box choice. Lagarfljót was formed in 2018, when Lead Vocalist Seth Hjelm and Keyboardist Vilhelm Kyärr met when simultaneously vacationing in Ibiza. They rose to fame in Iceland with nine consecutive #1 singles, such as "My Girl Scout Cookie Baby" and "Ballad of a Cryptid", which earned them the "Better than Beyoncé" award from Icelandic Billboard this year. "We met partying in da club through our mutual friend Corinna "Cranberry" Elaufsdottir, who now plays drums for us. She really shreds, man," Kerr shared with The Crustavian Weekly in an exclusive inter-

view. They credit their musical influences as Maroon 5, Demi Lovato and the howling of the brutal Icelandic wind, and define their sound as "Eclectic. Very eclectic."

Although they have reached fame in their home country, they remain completely unknown in the United States. "I literally have no clue who they are. If it wasn't for Cher opening, I definitely wouldn't come," Senior Beeta Lundberg said.

Students seem to be excited by the opening act, Cher. As she is being cautious about COVID-19, she will be beamed in via hologram technology to perform remotely. Cher plans to perform songs from her recent release, a cover album of ABBA songs.

Most Crusties were confused as to why Cher was chosen to be the opener for a much more low-key act, and even how Lagarfljót was selected. "We thought it was a fun choice! Besides, there will be Frost-Your-Owns so everyone will come anyways! Right?" Director of CARB Angelica Gunkle said. "I fricken' love Cher bro. She's mad iconic. She's got bops on bops on bops!" Junior Jack Jack Fincher raved.

The Lagarfljót x Cher Spring Concert will take place on April 32, 2021 and will begin at 10:00 p. m. Tickets are available from the CARB Information Desk beginning this Sunday.

Lagarfljót poses for a photo while visitng Crustavus

Missed Connections

Masked connection

I saw you socially distanced in the Caf and we made masked eye contact as we grabbed for a COVID safe salad. You were wearing athleisure and had a Gustavus lanyard around your neck. I can't stop thinking about taking you on a socially distant walk.

Courtyard Courtship

To the brunette in Uhler, I saw your tabby hair from the courtyard and I knew we were meant to be together. I tried to talk to you, but you only meowed back. Maybe you're shy?

In my feelings

We talked about potstickers and our mutual love for Drake. You had a sports backpack on, #47, I'm not sure what sport it was. Why do so many sports start with B?

Gus,

I know we broke up a year ago (after you went traying with that girl from your Geo Lab), but I would really like to start again. Let's meet at the spot where we first squaredanced. You know the place.

Co-Ed Activities

You live in the section next to mine. We sat and did Bio homework together, and talked about the color of our eyes. Yours were bright baby blue... like a sexy robin's egg. Maybe I could look into them a little longer if we were alone in my dorm room, let's put the Co in Co-Ed.

Do's and Don'ts: How to Ace Your Interview

Lol we don't need to have a caption because this isn't a real issue, but Cadence took this photo Cadence Paramore, obvi

Emma Lohman
Staff Writer

It's almost the end of the school year, which means that many Gusties are busy applying for summer internships and full-time jobs. If you've landed an interview, congrats. It means

that your résumé made it past the robots, otherwise known as the AI-driven Applicant Tracking System. Now all you have to do is stand out in the interview. I've compiled a list of tips from experienced recruiters to help you land the job or internship of your dreams.

Tip 1: There's no reason to change your routine in preparation for the interview. If you normally go to bed at 3 a.m. and skip breakfast, do that. And show up ten minutes late. You don't want to look too desperate.

Tip 2: Skip the blazer and

dress up in your best sweatpants and sweatshirt. You want to be comfortable right? You're a college student not a CEO.

Tip 3: Don't worry about the first impression. You will have plenty of opportunities to show your true personality once you get the position.

Tip 4: Be sure to call them by their first name. You're going to be future colleagues, so no need to use a Mr. or Mrs. or Dr. title. "Sup Tim," is a great way to establish that friendly relationship with your interviewer.

Tip 5: Skip the research on the company. You don't want to look like a know-it-all. Besides, hiring managers love talking about their company and they will be happy to fill you in.

Tip 6: Don't practice common interview questions beforehand. Your answers shouldn't look too rehearsed. The interviewer will be impressed at your ability to think on the spot. If they ask you questions that you don't know the answers to, make up a lie. It's good practice, especially if you're going into a sales position.

Tip 7: If you feel intimidated by the interviewer's intense eye contact, just stare at your lap. And

slouch so that you look relaxed.

Tip 8: They'll likely ask you, "Tell me about yourself." Here, they're looking for your entire life story. Be sure to include who your kindergarten teacher was and your favorite class in middle school. They'll love that.

Tip 9: Don't forget to ask how much you will be paid and how many vacation days you will have. Unpaid internships are a waste of time. You're a college student who has to pay their tuition and they should understand that.

Tip 10: At the end of the interview, when they ask if you have any questions, say no. It's best not to appear incompetent before your first day on the job. (If you do ask a question, make sure it's just: "You're going to hire me, right?")

Tip 11: There's no need to follow up with a thank you. In fact, they should be the ones thanking you for being willing to take the job.

Having a successful interview isn't as hard as Career Development would lead you to believe. All you have to do is be yourself.

Gustie of the Week: Poot Lovato

Emily VanGorder
Staff Writer

Junior Poot Lovato is Gustie of the Week, a title she says she is thrilled to receive. Lovato comes to Gustavus from Dallas, Texas, where her family moved to from Albuquerque, New Mexico, for her sister Demi's acting career. She starred alongside her sister in a number of roles, including Camp Rock and Sonny With A Chance. However, she remains unknown to many fans of these popular series.

"I had a pretty serious sun allergy at a young age, so I was only allowed to film at night, which limited my early career," Lovato said. Many of her scenes were also cut after filming, though exclusive extended scenes can be found on YouTube in which she can be seen in the background.

Lovato received treatment for her sun allergy over several years, which was healed by her family shaman before she finished high school.

"It was pretty rough... for a few years, I had to live in my basement and adopt a semi-nocturnal schedule in order to avoid sun exposure. But this experience also helped me write a great personal essay, which I believe is one of the main reasons I was accept-

ed to Gustavus" Lovato said.

Lovato found Gustavus after doing research into weather patterns in the U.S. After learning about Minnesotan winters, she applied to several schools close to the cities, but received the most aid from Gustavus.

"While I was looking at schools, I wasn't sure if my allergy was going to be cured by the time I made it to college, so I wanted to make sure I could find a school in a location that was cloudy and cold for most of the year" Lovato said.

When asked about the rumors that it was in fact her family that kept her locked in the basement, Lovato denied to comment directly.

"I have been instructed by the family's lawyers that there will be legal action taken if I answer that," Lovato said. "Both you and I will be sued and disappear."

Lovato is a junior biochemistry major and is interested in going into allergy research.

"I want to be able to help other people like me... if I can make a difference, then it's worth it" Lovato said.

Poot Lovato emerges from her basement to attend Gustavus

SHIP HAPPENS:

The boat. The economy. The worms.

Geena Zebrasky
Features Writer

20,000 tons is a lot. To give you some perspective, that's 1,466 blue whales worth of a ship. Or, almost three million 150-pound humans. However, unlike a whale or human could, the *Ever Given* ship couldn't manage to swim through the Suez Canal without getting stuck.

When the *Ever Given* got stuck, society got stuck too. We began grappling with the profound questions the ship presented to us—questions so profound, many found the only way to cope was through memes on Twitter.

The first question almost asks itself: should we even be constructing ships this large? Mothers globally can only shake their heads: if only the engineers had listened when they told them to take more than one trip inside with the groceries. The effort of picking up spilled groceries isn't worth it in the end. The wisdom in taking more than one trip, to save time in the end, was obviously lost when we built this ship.

Build bigger ships, because you'll have to take less trips, but you'll

also stop global trade for six days, three hours, and 38 minutes (thanks istheshipstillstuck.com). I'm not going to say it's our fault for trying to cram over 20,000 containers on one ship, but that's kind of what I'm saying.

With a big ship in the way, everyone got a little nervous about trade. Apparently, nine billion dollars in global trade was held up a day. That's like over \$50 billion total. Big numbers for a big ship. Economic professors in universities sat puzzled, considering how they could incorporate this into their week, so they can finally look like they're teaching something relevant to real life.

Here we run into the second question: where is this \$50 billion, and who came up with these numbers? Sure, all the stuff in the shipping containers will be late. In fact, many on the receiving end cancelled their orders, asking for a refund because they paid for two-day shipping. But why can't people just learn some patience? Money isn't real anyway, and everyone could use a week off sometimes. Maybe we could just write IOUs in

the interim. Perhaps most importantly, astrologers and worms globally demand respect for basically saving our global trade system. Without this week's Worm Moon, who knows how long the backhoe would've been digging the *Ever Given* out.

"I don't think it's fair, the credit the tugboats are getting. The moon caused the tide to rise, and if the moon decided to stop orbiting Earth, who knows what would've happened. Plus, this week's full moon means a lot to the worms, and the spotlight has been stolen from them by a ship that was just too big for its own good," Anne Lida of the Earthworm and Astrology Society said.

Regardless, the *Ever Given* was a big—perhaps too big—problem. In a week, that \$50 billion will seem completely made up, but the story of *Ever Given* will live forever on its very own lengthy Wikipedia page.

The take home message? Make sure to thank a worm (and the moon), especially if you're an economics major.

What Even is a Gustie?

Submitted

Corinne Stremmel
Editor-in-Chief

One might ask themselves from time to time, "what even is a Gusite?" Well, we don't know either. It's been made pretty evident by the other Minnesota private liberal arts schools what a Tommie is, an insignificant worm, an Ole, the Norwegian adaptation of a Potato Olé, a Johnnie, probably something inappropriate, a Cobber, sounds like an STI—I know there are more, but do they really matter?

So what even is a Gusite? Well, we know for sure that it's not any of the above. To find out more, we sent our interns, Ralph and Barbara, out with our investigative team to get to the bottom of this mystery. After weeks of searching in compost bins and even digging up the old Shakespeare pit, the interns came back empty handed.

"We found a variety of banana peels and old Gus Bucks since no one really knows how to use those things, and the Shakespeare pit had *Much Ado About Nothing*" said Ralph. "Note, Ralph was later fired for making such a pun in front of the entire WOOKLY staff. We are a no tolerance pun establishment since 1920.

We were getting down to the wire on this one. It was Tuesday night and this article was due the next day, so our investigative team pulled an all-nighter fueled by chocky milk and Godfather's pizza as per request of the interns. Finally, we pulled out a dusty Gustie artifact that has since been lost to the life and times of graduating classes before us, The Gustie Rouser.

The call of the Gustie goes something like this:

"Come on you Gusties, Fight on, Fight on. Shout out the battle cry of victory. Come on

you Gusties fight to the end, fight on for dear old G – A – C. Gusties will shine tonight, Gusties will shine, Gusties will shine tonight, Gusties will shine. Beat 'em, bust 'em, that's our custom, Gusties will shine!"

Immediately after finding this artifact, we sent our investigative team to THE CRUSTAVIAN WOOKLY lab to analyze each part of this call of the Gustie.

Extrapolating from the first lyric, "Come on you Gusties, Fight on Fight on," our team speculated that a Gustie might be some violent creature with this so-called fighting. Violence isn't the vibe, so our investigative team continued its forensic analysis.

"Shout out the battle cry of victory. Come on you Gusties fight to the end" sounded equally concerning. Is a Gustie some type of loud, competitive creature? A few experts agree with these findings, calling such species of Gustie a *Fraternious Boyious*.

Feeling slightly icked, the team then moved on to "Fight on for dear old G—A—C." So it can spell. An intelligent creature nonetheless, yet only managing to spell one nonsensical word. What's a GAC? That's for the next issue.

"Gusties will shine tonight, Gusties will shine, Gusties will shine tonight, Gusties will shine." Okay, we get it. They're shiny, so shiny in fact that we had to purchase WOOKLY-approved eye protection for the interns in order to avoid a lawsuit whilst reading the Rouser.

"We were nearly blinded just by that lyric," Barbara confessed. "We're thinking a Gustie is definitely a shiny object, possibly a spoon or another metal object. We're still waiting

on swab samples from the document to see if there are any remnants of glitter, sparkles, and the like."

The violence continued with the concluding line, "Beat 'em, bust 'em, that's our custom, Gusties will shine!" The team remained pretty skeptical of the whole thing wondering how could such a creature be lurking around on campus unnoticed despite its loud and shiny characteristics.

Could a Gustie be something completely different? Perhaps invisible too? Then, this morning as our team was scrambling to finish this article in time, a gust of wind managed to blow away the majority of our data. Fortunately, the wind got us thinking.

"We had heard many speculations over the years that the gust in Gustie referred to the wind, but none of our data pointed to such a conclusion. Plus, the lion mascot doesn't seem to fit the windy, Gustie brand," Barbara said.

"Yeah if you told me that a Gustie was a species of big cat instead of a gust of wind, I would have said that you were *lion*," Ralph said. *Note, THE CRUSTAVIAN WOOKLY will no longer be using evidence gathered from Ralph due to his obscene use of puns in this investigation.

After hours of frustration, too many slices of Godfather's pizza, and firing one of our unpaid interns, the investigative team decided to pack up.

Naturally, we had to adhere to a deadline and decided to turn in an unfinished investigative report, so if you ask yourself while passing some Gustavus-branded signage "What even is a Gustie?"—the world may never know.

We need to take the “art” out of liberal arts

Tori Smith
Former Art Major

There are few things in life that ruffle my feathers. People chewing too loudly, talking too loudly or breathing too loudly are just a few that I can think of off the top of my head.

After the art installation fiasco here on campus, however, the art department just shot to the top of that list.

A few weeks ago, a student installed what they considered to be an “art piece” outside of the dining hall. The piece consisted of a life-size statue of a dog chained to the side of the building. It was a mangy-looking mutt, covered in dirt and mud, and it was so skinny you could see its rib cage.

It was a pretty realistic piece, and I think it evoked a strong response from the community

Lexi Louis
President of FES

This may seem shocking to some physicists, but I strongly believe the earth is flat. Physicists have missed the point of view we see from our eyes and what technology cannot reveal. The earth appears as a sphere from a camera in space, but to us we only see the horizon. As you walk down the street, you do not see a curve. The earth is a flat oval. Some reasons for this are gravity, light, ancient myths, and the moon. As the president of the flat earth club, I urge you to read and consider the rest of this article.

Isaac Newton discovered gravity because of an apple falling from a tree. How could an apple fall from the bottom of the earth? How could an apple fall from the side of the earth? It isn't possible because gravity drags things down. The apple would drift away into space if it fell from the bottom

Maia Honi
Writer Bot

One of the most important missions here at Crustavus is our green movement. With compost bins everywhere, a Crustavus student is able to be a little more green in their daily lives. One thing we can't be green with is our body's gas output. Once we start sweating, a human being can release a lot of grossness into the air. It's unpleasant to look at, it's smelly, and it needs to go. Thankfully, Crustavus has released a new action plan to help solve this problem. The campus has announced its decision to replace all student workers with robotic helpers. Once the action plan is fully funded with alum donation funds, the change will begin and take six months to finish. The robots will be supplied by Elon Musk, which makes the \$579 million investment worth it.

The former student workers are glad to be able to take a break and definitely aren't upset that they are out of a job. I was told to say that if you hear

because some students would leave food and blankets out for him. I guess that was nice of them to do, but it's not like the dog was cute or anything. I, for one, did not care to see this filthy dog begging outside my dining hall.

In order to remove this eyesore from my sight, I contacted the art department. As one could imagine, they droned on and on about how the piece was an example of “interactive art” and that it “encourages discourse around the topic of animal welfare and assisting the vulnerable” and yada yada yada.

I wasn't going to listen to any of these lame excuses. I went to the administration directly and told them that I don't want to see any art that makes me feel uncomfortable. Art is supposed to be pretty, like flowers and rainbows, not

gross statues of animals covered in mud.

After many phone calls, the statue was finally removed, and students could feel comfortable on campus again. Peace was restored, all thanks to me.

Despite my heroism, I still feel that there is more work to be done. I fear that the art department will continue their reign of terror on this beautiful campus, and that's why we need to put an end to it. Let's face it, the best art has already been made by people like Vincent Van Gogh, Claude Monet and Leonardo DiCaprio. They understood how to make real art without having to come up with some deep meaning behind every piece. The Mona Lisa is just that: a girl named Mona. Nothing more, nothing less.

There's no reason to keep

Only thing to fear is sphere itself

is flat. If we glance at the sun, we cannot discern its shape clearly because of its blinding lights. Its powerful rays make it difficult to ascertain if it is a sphere.

The shape of the earth being like an egg shaped frisbee makes more sense than a sphere because of observable motions. When we throw a ball, it doesn't have any of the same properties as throwing a frisbee. A frisbee stays afloat much longer in the air than a baseball. How could two balls orbit each other better than two frisbees? The milky way is shaped like a giant, elongated frisbee. Everything moves better this way around the massive black hole at the center.

If the earth was hollow, a sphere, or square, it wouldn't be understandable. Some ancient myths thought the earth was hollow for an underworld, but we can use a shovel and dig into the ground to see it isn't hollow. However, it is

making art, so why should we even have an art department? It's a waste of the Crollege's resources. Instead of spending all that money on so-called “artists” who make me think about things I'd rather just ignore, the college should put that money into the athletics department because I like sports more, plain and simple.

Cutting the art department out of the Crollege's curriculum would probably save the school a lot of money in renovation costs, too. It's clear that the art building isn't going to last another ten to fifteen years without some form of major renovation. The roof is leaking, there's dirt inside the windows somehow, and there's not even enough studio space to hold all of the art students.

Instead of fixing these issues to create a bigger and better space for students to create

dangerous to dig too far. We will reach a point at the bottom of the earth, and we will fall off the planet. We have tangible, concrete proof that the earth is layered like an onion. We can't look from an outside perspective of space and look back at Earth to see it is a sphere.

Some ancient myths thought the earth was a four cornered square. This is the closest theory of the truth, but it lacks the correct shape. How could a perfectly cut square exist in space? The earth has been weathered over time and became an oval. The earth is similar to an onion and a cake. It is flat, layered, and thick.

Today it is widely thought and accepted that the earth is a sphere. It has slipped past our innate ability of questioning and individualism to ponder if it is true. We have silently accepted what we see from textbooks and pictures. Most have conformed to the idea of a spherical planet and avoided

art and grow as artists, why not tear it all down and put in a mini golf course? That would be way more fun for me.

In conclusion, it's time to face the facts. The art department needs to go. There is no good reason to keep it going besides letting the art students make atrocious art like the statue of the starving dog. Art nowadays just isn't important anymore, and no one needs to see more of it.

If you want to keep in touch with me and my journey to taking down the art department, you can follow me on my personal Instagram account where I post super artsy pics that always get a ton of likes, or you can follow my second account where I make and sell cute earrings and necklaces to make a little extra cash on the side.

And again, just to reiterate, art is dead so let's just let it go.

dissenting to it. However, what we see and perceive with our eyes is the closest to the truth. We don't see the earth from space, we only see it from the ground. We can constantly produce pictures of a spherical earth that depict vivid realism, but we can't see the pictures existing from our eyes.

The earth is not a sphere, cube, or a square. The earth is a flat oval because of its properties, its shape and its surroundings. A frisbee will stay afloat much longer than a sphere. The moon does not appear three dimensional from the ground. We only see one side of it because the other side of it is nonexistent. I urge you to attend our meetings and come to understand our reality that is so often denied.

robots, the inventors aren't too worried about it.

“The robots are programmed to follow humanity's orders. They aren't able to stray from that programming, and don't need to limit themselves to prevent what-ifs.” This statement is from the same infamous interview where Gesult actually kicked the reporter out after five minutes to deal with the anti-robot protest happening outside of the head offices,” Robotic Expert Franizinaard Gesult said.

Though robots are slowly but surely taking over our daily lives in all aspects, you can't help but marvel at the genius it took to create these aesthetically pleasing and beautiful machines. So at the end of the day when your android boyfriend develops sentience and cheats on you, or your iDog runs away from home, step back and recognize how marvelous it is that you get to be alive to witness this moment in history. This will make a heck of a story for your grandkids to hear, that is if humanity isn't wiped out by robots first.

of the earth or the side. The reason you cannot visit Antarctica is because if you jumped from the snow you would fall off of the face of the earth. In addition, Isaac Newton said that the moon would fly away if gravity didn't exist. Another clue that the earth is flat is we never see the “far side” of the moon.

When we look into the night sky, we only see two dimensional objects because everything is flat. There is no such thing as the far side of the moon because it doesn't exist. When we apply this knowledge to the earth, we realize that the earth is also flat. We don't see three dimensional objects when we look into space through a telescope, we see a flat plane of them. You can't put 3D glasses on and look through a telescope to try and see if a planet is a sphere instead of a flat oval. You will inevitably see one side of the planet or star because it

Robots: The New Face of Crustavus

any news about a protest happening to please report it to Crampus Soofety. The new robot workers coming in reportedly put out 98 percent less gas than their human counterparts, which helps Crustavus' greenhouse gas emissions go down. They also stay cleaner longer, since they don't have to worry about possibly having a booger on their hand after they wipe their nose. They don't even have noses. You can use regular canola oil or any type of oil to keep the robots running smoothly, which means they never have to stop working. This means that the Market Place can turn into a 24-hour establishment, which would be so good for my late night cravings.

This next step for Crustavus has been seen in other places in the world, with robotics becoming the new normal for many different day-to-day functions. These robots are going to be able to talk and hold conversations, which means that they could possibly replace the Crounseling Centre as well.

After all, talking to actual people about your feelings is gross and “natural”, and who wants that? Robots don't have feelings to cloud their judgement, so they can give you the most logical help. They also don't judge you for holding them if you start crying, which is very reassuring. Robots have also been on the rise for replacing ESAs on campus, which may explain the increase of BB-8s rolling around.

Of all the things robots are replacing, you would expect love to be the last thing on that list. However, students across GAC have been hopping on the robot love train. New customizable androids have been the hottest buy for lonely single twenty-somethings everywhere. These androids are capable of analyzing speech patterns to be fine tuned in knowing how you feel, as well as having the highest tech cameras in their eyes that you can soulfully gaze into. By being able to customize how the android looks and behaves, you can essentially create your

dream partner. Literally, you can make the android into that boy/girl/friend you had a dream about that you can't forget. The androids are powered by solar energy and can go three days before needing to be charged. You can take them to the coffee shop, the park, anywhere for the perfect date. Except water parks, don't go to the water park or pool, android partners are not waterproof yet.

Though robots are the greatest thing ever created, they can make mistakes. During the test runs for the campus' new barista bots, there was an incident where the barista bot started on fire. This is thought to have happened due to coffee grinder dust getting into the robot, but it can't be for certain. The robots are also reported to have insane amounts of strength, which is useful but slightly dangerous. They can lift heavy boxes and handle food deliveries, but they can also crush a man's sternum when attempting to perform CPR. Despite concerns over the safeness of

April Fools Day Pranks

Crossword

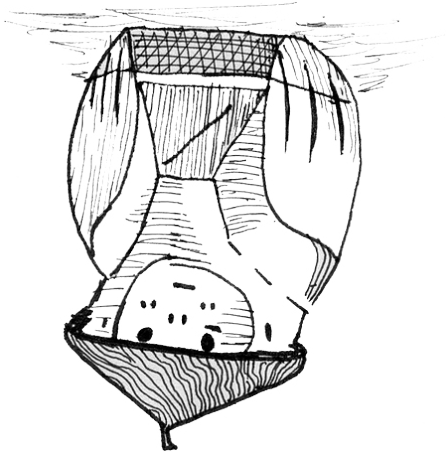

"Spring Time Games" by Bryanna Filip

April Horoscopes

- Aries:** Keep your suspicions to yourself until the time is right.
- Taurus:** You're going to want to avoid kids this month. Especially in large crowds.
- Gemini:** Whatever you do, do not pull pranks this month. Everyone is sick of them and they will backfire.
- Cancer:** Get some sleep. You don't know what's coming.

The Monkey Man
Eldritch Being

The Monkey Speaks

- Leo:** When you have your fifteenth cup of coffee this month, be careful. Only about half of it can be sipped safely.
- Virgo:** You're highly ranked among the campus squirrels right now. Be careful. It's a precarious position.
- Libra:** Don't tell the star apps where you were born. They already know, but don't confirm it.
- Scorpio:** Watch out for the things that live in the ground and don't stay in one place for too long.
- Sagittarius:** Open a window. Your room stinks.
- Capricorn:** The internet doesn't lie, but you certainly can.
- Aquarius:** It's safe to say that you should not leave your home next weekend.
- Pisces:** Don't watch any room-coms this week. Unless it includes James Marsden. Yes, *Sonic* counts.

Crossword Answers: Across. 1. Sir John Hargrave, 9. Sidd Finch, 11. Left-Handed Whopper, 12. flying, 13. Mt. Edgecumbe Eruption, 14. collapsed, 15. turn it upside down. Down. 2. Norwegian Wine Surplus, 3. Washing of the Lions, 4. The Sydney Iceberg, 5. teddy bear, 6. Taco Liberty Bell, 7. naked ice borer, 8. San Serriffe, 10. moon landing.

A comprehensive history of Crustavus Campus Cryptids

Adam Pierce & Wen Bick
Better than You :P

As I am sure you all know, there has been a history of hauntings on the Crustavus campus. This week, working in conjunction with the Monkey Man, the WEEKLY's Investigative team took to the streets of St. Peter after hours to uncover the secrets of the Crustavus campus, and this is what they found.

The Monkey Man. The eldritch being we all know and love, the Monkey Man offers sage advice in the Entertainment Section on a bi-weekly basis.

"While we know the Monkey Man is a benevolent force and excellent source of prophecy and warnings, it is unfortunate that we are forced to communicate with it through the Monkey's Oracle," Intern Daina said. "The lights are really hard to understand and we are running out of geese to sacrifice."

Adam Pierce. Who is he? That is the question on all of our minds here in the Weekly office.

"We don't have anyone named Adam on our payroll," said Editor-in-Beef Corinne Stremmel. "We don't know where he comes from or how he keeps putting his articles in the paper. If anyone has any information leading to the apprehension of this pumpkin man, the WEEKLY would greatly appreciate it."

"He keeps hiding the F-word

in the crosswords," Assistant Editor-in-Beef Ben Wick said. "We don't even have any interns, I don't know where he gets his information."

The Beast. The Beast dwells in the Arb and is only spotted on nights lit by a sliver of a moon. In a February Issue of the Weekly, the Monkey Man issued a warning about the Beast, however there have been reports that this warning has not been heeded. Before leaving to investigate, Intern Brennan said the following.

"I'm pretty sure the Beast is just a stalker some drunk first years saw one time and it's just blown up from there. I'm not afraid, I'm going to spend the night in the Arb," Brennan said. Brennan has since been reported missing. Rest in peace, Brennan, your sacrifice will never be forgotten. Our thoughts and prayers go out to his family.

The Old Cow. Have you ever been in Old Main and heard the mournful braying of a lost cow? That's the Old Cow, the bovine spirit which wanders the halls of Old Main after office hours have ended. As the tale goes, the Cow was one of two casualties when Old Main was moved from Red Wing, MN to its current resting place at the top of the Hill.

We sent Alex the intern out to interview the Old Cow, but he returned two days later covered in grass and sour milk with no comment from the Cow.

The Rundi Ghost. If you

have been a student on the Crustie campus for more than a week, you are familiar with the Rundi Ghost. The Ancient Tablets tell of a student, driven mad by the stress of the workload of an Econ major, went into the Rundi Chapel and simply ceased to exist. Their spirit had joined in with that of the entire campus. Intern Chris was sent into the basement chapel to investigate.

"It was a really spiritual experience," Chris said. "Lights flicked and doors opened by themselves. I brought an Ouija

board with me, but the spirit didn't communicate through it. It was more of a feeling, you know? I could just tell that they were there and they were so much better than me because of how much work they had to do."

Squirrel Overlord. The Squirrel Overlord has issued an edict that prevents any interviews with them from being published. They have allowed us to put out the statement that "You only need worry if you are a Virgo."

Mattson Hall. We've all heard whispers of Mattson Hall, but only the Chosen (aka nursing majors) have ever been able to enter this elusive academic building. From what THE CRUSTAVIAN WEEKLY's research interns could garner, it seems to magically change locations on campus to prevent anyone from entering who isn't supposed to. Local Crustie lore tells the tale of one student, Candace Paradiddle '78, who supposedly happened upon the building and entered the depths despite being an Environmental Studies major. She was found near the Arb's wetlands with no memory of being inside the building or how she got to the Arb. She hasn't spoken since this event.

CRUSTAVIAN WEEKLY intern Maureen attempted to look into the history of this building but was continually turned away by the Archive Librarians, who locked the doors, turned off the lights, and pretended no one was in their office. "It was pretty weird of them. I could see them eating lunch in the dark and pretending not to see me," Maureen said. The Nursing Department was asked for comment, but curiously enough, there was also no available directory of professors or students enrolled in the department. Maureen has yet to return from her search for Mattson, so please let us know if you've seen her around. We're getting worried.

This is rumored to be the only photo of Mattson in existence.

This photo just appeared in a wax-sealed envelope in our office. We have no idea how it got there. Like, we had to change the locks on the door.

Crustavus Archives

Old Main and its spectral cow resident are well-known among Crusties.

Candace Paradiddle '78 is one of the only Crusties to have a close encounter with Mattson Hall.

Who knows
